CARBON SUPPRESSORS

ABOUT THE MANUFACTURER

- A-TEC has gained the knowledge of what it takes to develop and produce innovative and effective sound suppressors.
- A-TEC manufactures suppressors for:
 - Military
 - Law Enforcement
 - Hunting and shooting sports
- The company's mission is to be innovative in the development of products with high quality paired with functionality.
 - Introduce the first modular design suppressors
 - Most respected suppressor manufacturer in the Scandinavian market.
 - Patented technology
- All the products are developed and produced in Norway.
- You can only find our products at licensed gunsmiths and weapon dealers.

CARBON

*Introducing the lightest Hunting
suppressor in the world!*

CARBON

- **Key Features**

- The Carbon Suppressor is an extremely light weight and effective silencer
- Materials
 - Aluminum inside
 - Strong carbon on the outside.
- Sizes
 - O1-195 millimeters end to end
 - O2-235 millimeters end to end
 - O3-275 millimeters end to end
- Weight
 - Only 280 grams, 320 grams and 380 grams
 - Lightest In the world
- Noise Reduction:
 - 24-38dBc noise reduction in 308W
 - Measurements with the 6.5 x55: More than 36 dBc reduction

Carbon Suppressors provide the best noise reduction per gram silencer of it kind in the market today!

(Safety Tag)

- Carbon is a strong material that can withstand a lot of beating however, there is a limitation.

- Carbon02 is designed to shoot in series up to 10 rounds with standard cartridges before it needs to cool down.

- **Safety tag**

- It comes with a calibrated temperature sticker that shows how many shots you can shoot with your gun before the silencer must be cooled down.

- The safety tag works only once and if the first indicator has been triggered, you get no further indication of high temperature.

- If the sticker is removed or indicator No. 2 “stop use” indicator is triggered you are infringing on the warranty terms.

- Stage 1 - Warning:** You have reached the limit of overheating. Your rifle needs a cooling time. Stop shooting as you can trigger the stage indicator.

- Stage 2 - Stop Use:** You have exceeded the safety limit and has suffered permanent impairment of the carbon tube. Carbon fiber tube **MUST** be replaced before further use. Further use is prohibited and may result in damage to the weapon and the user.

Thank you
