Product Description

- The Dragon is a high performance, modular, lightweight sound suppressor.
- Designed, developed and originally manufactured in Norway, the suppressor is based on a highly successful design, incorporating patented technology.

Berretta 9mm

Glock 9mm

Construction and Design

- The suppressor is constructed from stainless steel modules, with Inconel alloy internal components for high durability and exceptional temperature tolerance.
- Each module is CNC-machined, with no welding and no moving parts. This modular, monolithic construction gives excellent durability, even with automatic fire and sustained operation as well as with carbon build-up.
- There are no welds to crack or springs to jam or break. Each module incorporates the internal and external component parts – there is no additional outer tube for a shorter overall length.

Sig P226

Modular Design

- The modular design enables the Dragon suppressors to be specified to a user's own mission-specific requirements, by adding or removing suppressor modules.

- A range of Dragon-type suppressors will evolve, using different materials for heavy or light users, but with the same 'Dragon' family characteristics.

Dragon Suppressor for Pistols

(Model #:Dragon 9/6)

The Dragon-9/6 is one of the best silencers for pistols and is one of our absolute top products. Made, for the time being, only for 9mm pistol. The Dragon p6 has high performance and has very low weight compared to competing products.

Weight Centre at the damper is located far back, enabling fast double shot. A preferred product by professional users.

Description

- The Dragon-9/6 sound moderators are compact, ultra-lightweight silencers, incorporating a booster system optimized for semi-automatic:

- Glock,
- H&K USP
- SIG-SAUER
- Beretta pistols.

- Designed in Norway by A-TEC, and comes with:

- Four Modules

- Weight: 185 grams
- Length: Adds only 145 mm net length to the pistol
- Diameter :of just 35 mm,
- Still good enough to be used without hearing protectors.

4 modules

- Six Modules

- Weight: 215 grams
- Length: Adds only 185 mm net length to the pistol
- Diameter :just 35 mm,
- It is slim enough to be used with standard sights.
- Without the booster (for Beretta 92, etc.), the PMM-6 moderator weighs only 135 grams

6 modules

- They are all-Aluminium modular units, and black anodized.

Performance

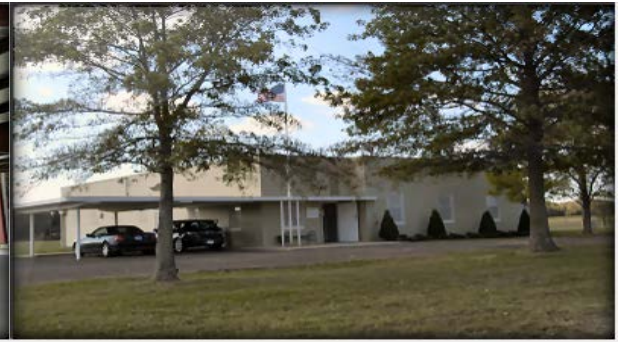

- The Dragon 9/6 sound moderator reduces sound emissions by -28 to -32 dB(A) (depending on barrel length, caliber and ammunition type).
- With subsonic ammunition, the muzzle signature is usually much less than the noise of the bullet hitting the target.
- With high velocity ammunition, the pistol sound moderator substantially reduces the muzzle blast although no silencer can reduce the supersonic bullet flight noise.
- All Dragon 9/6 (9mm) sound moderators comply with the latest personal noise exposure limit set by the European Directive 2003/10/EC (140 Pa or 137 dB(C)).
- The Dragon-9 pistol sound moderators are available with M13x1, M13.5x1 LH and ½"x28 UNF internal threads to fit directly onto a screw-cut pistol barrel.

Specifications

Model	Dragon 9/4	Dragon-9/6
Calibre :	9 x 19 mm	9 x 19 mm
Weight:	180 g (6 oz)	215 g (7½ oz)
Net Length:	143 mm	185 mm
Mounting:	on barrel thread	on barrel thread
Number of Modules	4	6
Sound Suppression (ref. US MIL-STD-1474D)*	-22 to -26 dB(A)	-28 to -32 dB(A)
Overall Length x Diameter	153 x 35 mm	195 x 35 mm
Maintenance Interval (optional, cleaning only)	1,000 rds	1,000 rds
Warranty:	2 years	2 years

* The above sound suppression figures are measured "dry". A little water or grease in the sound moderator can improve sound suppression by up to 6 dB
